

ABDELRAHMAN OSAMA MOHAMED

Android Developer | Kotlin & Jetpack Compose Specialist | Basatin,maadi

abdelrhamnosama287@gmail.com | 01287019667 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven Android Developer with 2+ years of hands-on experience building native Android applications using Kotlin, Jetpack Compose, and Kotlin Multiplatform (KMP). Skilled in Clean Architecture, MVVM/MVI design patterns, RESTful API integration (Retrofit, Ktor), Room Database, Hilt dependency injection, Coroutines, and Flow for asynchronous programming. Proven track record delivering production-ready, scalable applications with strong command of SOLID principles, Agile/Scrum workflows, unit testing, and CI/CD pipelines.

CORE COMPETENCIES

Native Android Development • Kotlin • Jetpack Compose • Kotlin Multiplatform (KMP) • Clean Architecture • MVVM/MVI/MVP • Dependency Injection (Hilt) • RESTful API Integration • Retrofit & Ktor • Coroutines & Flow • StateFlow & LiveData • Room Database & SQLite • Firebase (Auth, Firestore, FCM) • WebSockets & Real-Time Systems • Unit & UI Testing (JUnit, Espresso) • CI/CD • Git & GitHub • Agile/Scrum • Material Design & UI/UX • Performance Optimization • Multithreading & Async Programming • Data Structures & Algorithms • SOLID Principles • Google Play Store Deployment • Cross-Platform Development (Flutter)

TECHNICAL SKILLS

- Languages: Kotlin (Expert), Java, Dart, C#
- Android Development: Native Android, Jetpack Compose, XML Layouts, Material Design, Android SDK
- Architecture & Patterns: Clean Architecture, MVVM, MVI, MVP, SOLID Principles, Design Patterns, Scalable App Architecture
- Android Jetpack: Hilt, Coroutines, Flow, StateFlow, LiveData, ViewModel, Navigation Component, WorkManager
- Networking & Data: Retrofit, RESTful APIs, Ktor, WebSockets, Room Database, Firebase (Auth, Firestore, FCM), Push Notifications
- Testing & Quality: JUnit, Espresso, Unit Testing, Debugging, Code Review
- Cross-Platform: Compose Multiplatform (KMP), Flutter
- Core Engineering: Data Structures, Algorithms, OOP, Problem Solving, Multithreading
- Tools & Workflow: Android Studio, Git, GitHub, CI/CD, Agile/Scrum, Google Play Store Deployment
- AI-Assisted Development: Cursor, Claude, Windsurf for rapid prototyping and architectural optimization

PROFESSIONAL EXPERIENCE

Freelance Android Developer — Self-Employed

Jan 2024 – Present | Remote

- Delivered DoDeal Desktop CRM (2026) using Compose Multiplatform (CMP), a fully native cross-platform desktop application targeting Windows and macOS from a single Kotlin codebase.
- Applied Clean Architecture (MVI pattern) to manage complex enterprise data flows across a multi-module codebase exceeding 5,000+ lines of maintainable, scalable code.
- Integrated Ktor for high-performance networking and RESTful API integration, reducing API response time by ~35% compared to the client's prior solution.

Android Developer Trainee (Internship) — Route IT Training Center

May 2024 – Oct 2024 | Giza, Egypt

- Built 4 production-ready native Android applications (Islamy App, To-Do App, E-Commerce App, News App) using Kotlin, totaling 8,000+ lines of clean, testable code.
- Applied Clean Architecture and MVVM/MVC design patterns, reducing average bug-fix time by ~25% through improved code separation and maintainability.
- Integrated RESTful APIs using Retrofit and implemented local data persistence with Room Database across all projects.
- Used Hilt for dependency injection and Coroutines/Flow for asynchronous programming, improving UI responsiveness by eliminating main-thread blocking.

KEY PROJECTS

Liar's Bar – Real-Time Multiplayer Card Game | Kotlin, Jetpack Compose, WebSockets

- Built a real-time multiplayer system using WebSockets, achieving seamless peer-to-peer connectivity with sub-100ms latency.
- Implemented complex game state management with Kotlin and Jetpack Compose, supporting 2–6 concurrent players.
- Designed an immersive UI with custom animations and audio-visual feedback, achieving a clean, production-ready architecture.

repo : <https://github.com/abdocrowinho/Liers-Bar-Offline-Mode>

Salary Tracker – Personal Finance App | Kotlin, Room Database, Clean Architecture

- Developed a local financial tracking app using Room Database with full CRUD operations and zero data-loss design.
- Applied Clean Architecture, ensuring 100% separation of concerns across data, domain, and presentation layers.

repo : <https://github.com/abdocrowinho/SalaryTracker>

DoDeal – Desktop CRM (Freelance, 2026) | Compose Multiplatform (CMP), Kotlin, Ktor, MVI

- Built a fully native desktop CRM application using Compose Multiplatform (CMP), targeting Windows and macOS from a single Kotlin codebase.
- Applied Clean Architecture with the MVI pattern to manage complex enterprise data flows, delivering all milestones on schedule.

Virtual Egypt – Graduation Project | Flutter, Clean Architecture, Responsive UI

- Built a cross-platform mobile app showcasing Egyptian tourism landmarks with a responsive UI across 10+ screen sizes.
- Achieved an Excellent grade for outstanding application of Clean Architecture and SOLID principles.

About Us – Real-Time Emotional Map | Kotlin Multiplatform (KMP/CMP), Supabase

- Built a real-time emotional map application letting users anonymously express and explore the world's emotional pulse in the present moment.
- Developed using Kotlin Multiplatform / Compose Multiplatform, targeting Android, iOS, and Desktop from a single shared codebase.
- Integrated Supabase for real-time backend data sync, authentication, and privacy-preserving anonymous data handling

EDUCATION

B.Sc. in Management Information Systems (MIS)

Thebes Higher Institute, Cairo, Egypt | 2019 – 2023 | Grade: Very Good | Graduation Project: Excellent

Android Development Diploma

Route IT Training Center, Giza, Egypt | May 2024 – Oct 2024

LANGUAGES

Arabic: Native | English: B2 – Intermediate
